

MariEMS

The MariEMS (Maritime Energy Management Training Strategic Partnership) second partners meeting took place on the 21st and 22nd April 2016 at the Southampton Solent University (SSU) Conference Centre in Southampton. The project was promoted during the European Maritime Day (EMD) events. The following photographs show Professor Ziarati and the President of EMSA together with representatives of Turku City as well as some discussion panels and meetings during the EMD in Turku, Finland.

This project is expected to help reduce energy use on board ships and in port and contribute to a significant reduction in marine pollutions and engine emissions. This project proposes the development of an energy management job and training specification, as well as an e-learning delivery system for the new role of the Energy Manager which has been created specifically for the shipping industry. The intention of MariEMS is also to encourage shipping companies to seek ISO 50001 certification.

Southampton Solent University is expected to run the first multiplier workshop seeking the view of maritime academics and industrialists on the training programme specification. The workshop is being prepared and is expected to held later this month (June 2016).
